EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Edward Lin on May 19, 2008.

The application has been amended as follows:

Cancel claims 8, 24-28, and 29.

Allowable Subject Matter

Claims 2-7, 9, 10, 12-16, and 20-23 are allowed.

The following is an examiner's statement of reasons for allowance:

Upon further search and upon further consideration of the prior art of record, it is the Examiners assessment that no reference taken alone or in combination teaches the method of manufacturing an arc tube in which a glass tube is formed into a double spiral by winding around a mandrel as presently set forth in independent claim 20.

Specifically, the Holzer reference (DE 198 55 240 A1 - see included English language translation) is deemed to be the closest relevant prior art to Applicants claimed invention. This reference teaches lowering a heat softened glass tube with a sagging intermediate portion so that the intermediate portion engages a mandrel (see

page 5), winding the heated glass tube about the mandrel to provide a double spiral configuration, and removing the glass tube having the double spiral configuration from the mandrel. The reference further teaches (see pg 3) that it is considered merely conventional to provide the mandrel with "flutes" or grooves as claimed in order to impart a desired shape to the coil. Such a grooved mandrel configuration is confirmed by the reference to Greiner et al (US 2,491,857).

The Holzer reference is silent regarding the process and steps required to prepare the sagging tubular form. That is, while Greiner teaches lowering a softened and sagging glass tube onto the winding mandrel, the reference is silent regarding Applicants claimed method of shaping straight tubular glass stock into the heat softened, sagging form. Further, such a process would not necessarily be considered as an obvious extension over the Holzer disclosed method. In short, no reference teaches the steps of,

"providing a predetermined length of an elongated straight glass tube;
Supporting the respective end portions of the glass tube with an
intermediate portion of the glass tube unsupported;
Heating the glass tube in a heating furnace and softening the intermediate
portion of the glass tube to sag;"

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
